

Temperature / Process Controllers & Programmers

PID with Time / Temperature Profiling Controllers

Features

- Total 9 profiles, a profile with 16, 32 or 64 segments at most
- Each segment to be configured as a ramp or dwell (soak)
- After event process goes to run, hold, abort, manual, failure transfer, off mode, next segment or select the second PID values
- High accuracy of 18-bit A to D input, and 15-bit D to A output
- The fast sample rate of 200 msec
- Fuzzy control to reach set point at the least overshooting & less time
- Up to three relays are configurable for event output
- Analog retransmission of process value & set point value
- Optional RS-485 or 232 communications
- Programmable port for easy configuration or calibration
- Lockout protection for security requirement
- Bumpless transfer of safely control while sensor breaks
- Digital filter to improve the stability of process value
- SEL function for easy operation

BrainChild

Overview

The Fuzzy Logic plus PID microprocessor-based profiling controller series, incorporate two bright, easy to read 4-digit LED displays, indicating process value and set point value. The Fuzzy Logic technology enables a process to reach a predetermined set point in the shortest time, with the minimum of overshoot during power-up or external load disturbance.

P91 is a 1/16 DIN size panel mount profiling controller. It can also be used for rail mount by adding a rail mount kit. P41 is a 1/4 DIN size panel mount profiling controller. These units are powered by 11-26 or 90-250 VDC/VAC supply, incorporating a 2 amp. control relay output as standard. The second output can be used as cooling control, an event output or an alarm. Both outputs can select triac, logic output, linear current or linear voltage to drive external device. The units are fully programmable for PT100 and thermocouple types J, K, T, E, B, R, S, N, L, C, P with no need to modify the unit. The input signal is digitized by using a 18-bit A to D converter. Its fast sampling rate allows the unit to control fast processes.

There are more functions than the heating and cooling control could be configured for the controller outputs, these include: up to three alarm outputs, up to three event outputs and up to two analog retransmission outputs.

Digital communications RS-485 or RS-232 are available as an additional option. These options allow the units to be integrated with supervisory control system and software.

A programming port is available for automatic configuration, calibration and testing without the need to access the keys on front panel.

By using proprietary Fuzzy modified PID technology, the control loop will minimize the overshoot and undershoot in a shortest time. The following diagram is a comparison of results with and without Fuzzy technology.

The series can be configured as a single set point controller (static mode) or a ramp and dwell profiling controller (profile mode). The profile mode feature allows the user to program up to 9 profiles of up to 64 free-format (ramp, dwell, jump or end) segments each. The total segments available for the product is 288 segments

The profiling controllers contain the following features:

Flexible Configuration of Program

There are up to 64 segments can be defined for a profile. Each segment can be configured as a ramp or a dwell (soak) segment or defining a repeat number of cycles at arbitrary location within the profile and finally terminated by an end segment. The user can edit a currently running profile.

Maximum Capacity of Program

There are at most 9 profiles can be defined and 288 segments totally available for all profiles. The profiles are divided into three kinds of length. The short length profile contains 16 segments, the medium length profile contains 32 segments while the long length profile contains 64 segments at most.

Event Input

The event input feature allows the user to select one of eight functions: enter profile run mode, enter profile hold mode, abort profile mode, enter manual mode, perform failure transfer, enter off mode, advance to the next segment and select second set of PID values.

Programmable Event Outputs

Up to three relays are configurable for event outputs and the state of each output can be defined for each segment and end of profile.

Analog Retransmission

The output 4 and output 5 (P41 only) of the products can be equipped with analog output module. The output can be configured for transmitting the process value as well as set point value.

High Accuracy

The series are manufactured with custom designed ASIC (Application Specific Integrated Circuit) technology which contains a 18-bit A to D converter for high resolution measurement (true 0.1°F resolution for thermocouple and PT100) and a 15-bit D to A converter for linear current or voltage control output. The ASIC technology provides improved operating performance, low cost, enhanced reliability and higher density.

Fast Sampling Rate

The sampling rate of the input A to D converter reaches 5 times/second. The fast sampling rate allows this series to control fast processes.

Fuzzy Control

The function of Fuzzy control is to adjust PID parameters from time to time in order to make manipulation output value more flexible and adaptive to various processes. The results is to enable a process to reach a predetermined set point in the shortest time, with the minimum of overshoot and undershoot during power-up or external load disturbance.

Digital Communication

The units are equipped with RS-485 or RS-232 interface card to provide digital communication. By using the twisted pair wires there are at most 247 units can be connected together via RS-485 interface to a host computer.

Programming Port

A programming port is used to connect the unit to a hand-held programmer or a PC for quick configuration, also can be connected to an ATE system for automatic testing & calibration.

Auto-tune

The auto-tune function allows the user to simplify initial setup for a new system. A clever algorithm is provided to obtain an optimal set of control parameters for the process, and it can be applied either as the process is warming up (cold start) or as the process has been in steady state (warm start).

Lockout Protection

According to actual security requirement, a password is provided to prevent the unit from being changed abnormally.

Bumpless Transfer

Bumpless transfer allows the controller to continue to control by using its previous value as the sensor breaks. Hence, the process can be well controlled temporarily as if the sensor is normal.

Digital Filter

A first order low pass filter with a programmable time constant is used to improve the stability of process value. This is particularly useful in certain application where the process value is too unstable to be read.

SEL Function

The units have the flexibility for user to select those parameters which are most significant to him and put these parameters in the home page. There are at most 8 parameters can be selected to allow the user to build his own display sequence.

Connection Diagrams

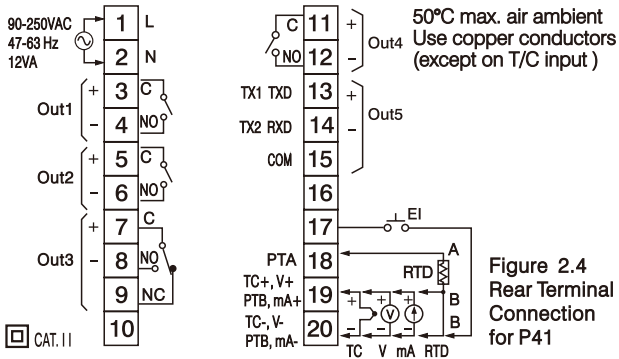

Figure 2.4
Rear Terminal
Connection for P41

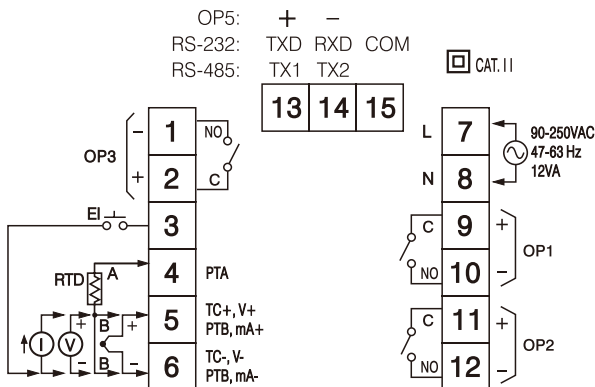

Figure 1.2
Programming Port
Overview

50°C max. air ambient
Use copper conductors (except on T/C input)

Figure 2.5
Rear Terminal
Connection for P91

Mounting Dimensions

A special connector can be used to touch the programming port which is connected to a PC for automatic configuration, also can be connected to an ATE system for automatic calibration and testing.

The programming port is used for off-line automatic setup and testing procedures only. Don't attempt to make any connection to these pins when the unit is used for a normal control purpose.

Specifications

Power

90 ~ 250 VAC, 47 ~ 63 Hz, 12VA, 5W maximum
11 ~ 26 VAC / VDC, 12VA, 5W maximum

Input

Resolution : 18 bits

Sampling Rate : 5 times / second

Maximum Rating : -2 VDC minimum, 12 VDC maximum
(1 minute for mA input)

Temperature Effect : A1.5uV/ °C for all inputs except mA input
A3.0uV/ °C for mA input

Sensor Lead Resistance Effect :

T/C: 0.2uV/ohm

3-wire RTD: 2.6 °C/ohm of resistance difference
of two leads

2-wire RTD: 2.6 °C/ohm of resistance sum of two leads

Burn-out Current : 200 nA

Common Mode Rejection Ratio (CMRR) : 120dB

Normal Mode Rejection Ratio (NMRR) : 55dB

Sensor Break Detection :

Sensor open for TC, RTD and mV inputs,

Sensor short for RTD input

below 1 mA for 4-20 mA input,

below 0.25V for 1 - 5 V input,

unavailable for other inputs.

Sensor Break Responding Time :

Within 4 seconds for TC, RTD and mV inputs,

0.1 second for 4-20 mA and 1 - 5 V inputs.

Characteristics:

Type	Range	Accuracy @ 25°C	Input Impedance
J	-120°C~1000°C (-184°F~1832°F)	±2°C	2.2 MΩ
K	-200°C~1370°C (-328°F~2498°F)	±2°C	2.2 MΩ
T	-250°C~400°C (-418°F~752°F)	±2°C	2.2 MΩ
E	-100°C~900°C (-148°F~1652°F)	±2°C	2.2 MΩ
B	0°C~1800°C (32°F~3272°F)	±2°C (200°C~1800°C)	2.2 MΩ
R	0°C~1767.8°C (32°F~3214°F)	±2°C	2.2 MΩ
S	0°C~1767.8°C (32°F~3214°F)	±2°C	2.2 MΩ
N	-250°C~1300°C (-418°F~2372°F)	±2°C	2.2 MΩ
L	-200°C~900°C (-328°F~1652°F)	±2°C	2.2 MΩ
C	0°C~2315°C (32°F~4199°F)	±2°C	2.2 MΩ
P	0°C~1395°C (32°F~2543°F)	±2°C	2.2 MΩ
PT100 (DIN)	-210°C~700°C (-346°F~1292°F)	±0.4°C	1.3 MΩ
PT100 (JIS)	-200°C~600°C (-328°F~1112°F)	±0.4°C	1.3 MΩ
mV	-8mV~70mV	±0.05 %	2.2 MΩ
mA	-3mA~27mA	±0.05 %	70.5 MΩ
V	-1.3V~11.5V	±0.05 %	650 KΩ

Output 1 / Output 2

Relay Rating: 2A/240 VAC, life cycles 200,000 for resistive load
Pulsed Voltage: Source Voltage 5V, current limiting resistance 66Ω
Linear Output Characteristics:

Type	Zero Tolerance	Span Tolerance	Span Tolerance
4~20 mA	3.6~4 mA	20~21 mA	500Ω max.
0~20 mA	0 mA	20~21 mA	500Ω max.
0~5 V	0 V	5~5.25 V	10 KΩ min.
1~5 V	0.9~1 V	5~5.25 V	10 KΩ min.
0~10 V	0 V	10~10.5 V	10 KΩ min.

Linear Output

Resolution: 15 bits
Output Regulation: 0.02 % for full load change
Output Settling Time: 0.1 sec. (stable to 99.9 %)
Isolation Breakdown Voltage: 1000 VAC
Temperature Effect: ±0.01 % of SPAN / °C

Triac (SSR) Output

Rating: 1A / 240 VAC
Inrush Current: 20A for 1 cycle
Min. Load Current: 50 mA rms
Max. Off-state Leakage: 3 mA rms
Max. On-state Voltage: 1.5 V rms
Insulation Resistance: 1000 Mohms min. at 500 VDC
Dielectric Strength: 2500 VAC for 1 minute

DC Voltage Supply Characteristics (Installed at Output 2)

Type	Tolerance	Max. Output Current	Ripple Voltage	Isolation Barrier
20 V	±1 V	25 mA	0.2 Vp-p	500 VAC
12 V	±0.6 V	40 mA	0.1 Vp-p	500 VAC
5 V	±0.25 V	80 mA	0.05 Vp-p	500 VAC

Alarm

Alarm Relay: Form C Rating
 2A/240VAC, life cycles 200,000 for resistive load.
Alarm Functions: Dwell timer, Deviation High / Low Alarm,
 Deviation Band High / Low Alarm,
 PV High / Low Alarm,
Alarm Mode: Normal, Latching, Hold, Latching / Hold.
Dwell Timer: 0.1-4553.6 minutes

Data Communication

Interface: RS-232 (1 unit), RS-485 (up to 247 units)
Protocol: Modbus Protocol RTU mode
Address: 1-247
Baud Rate: 2.4~38.4 Kbits/sec
Parity Bit: None, Even or Odd
Stop Bit: 1 or 2 bits
Communication Buffer: 64 bytes

Analog Retransmission

Output Signal: 4-20 mA, 0-20 mA, 0-5V, 1-5V, 0-10V
Resolution: 15 bits
Accuracy: ±0.05 % of span ±0.0025 %/°C
Load Resistance: 0 - 500 ohms (for current output)
 10 K ohms minimum (for voltage output)
Output Regulation: 0.01 % for full load change
Output Settling Time: 0.1 sec. (stable to 99.9 %)
Isolation Breakdown Voltage: 1000 VAC min.
Integral Linearity Error: ±0.005 % of span
Temperature Effect: ±0.0025 % of span/°C
Saturation Low: 0 mA (or 0V)
Saturation High: 22.2 mA (or 5.55V, 11.1V min.)
Linear Output Range: 0-22.2mA(0-20mA or 4-20mA)
 0-5.55V (0-5V, 1-5V)
 0 - 11.1 V (0-10V)

User Interface

Dual 4-digit LED Displays
Keypad: 4 keys
Programming Port: For automatic setup, calibration and testing
Communication Port: RS-232 and RS-485

Control Mode

Output 1: Reverse (heating) or direct (cooling) action
Output 2: PID cooling control, cooling P band 50~300%
 of PB, dead band -36.0 ~ 36.0 % of PB
ON-OFF: 0.1 - 90.0 (°F) hysteresis control (P band = 0)
P or PD: 0-100.0 % offset adjustment
PID: Fuzzy logic modified
 Proportional band 0.1~900.0 °F. Integral time 0-1000 seconds
 Derivative time 0-360.0 seconds
Cycle Time: 0.1-90.0 seconds
Manual Control: Heat (MV1) and Cool (MV2)
Auto-tuning: Cold start and warm start
Failure Mode: Auto-transfer to manual mode while
 sensor break or A-D converter damage
Ramping Control: 0-900.0 °F/minute or 0-900.0 °F/hour ramp rate

Digital Filter

Function: First order
Time Constant: 0, 0.2, 0.5, 1, 2, 5, 10, 20, 30, 60 seconds programmable

Profiler

Number of profiles: 9
Number of Segment per profile
Profile 1, 2, 3, 4: 16
Profile 5, 6, 7: 32
Profile 8, 9: 64
Event Outputs: 3

Environmental & Physical

Operating Temperature: -10°C to 50°C
Storage Temperature: -40°C to 60°C
Humidity: 0 to 90 % RH (non-condensing)
Altitude: 2000m maximum
Pollution: Degree 2
Insulation Resistance: 20 Mohms min. (at 500 VDC)
Dielectric Strength: 2000 VAC, 50/60 Hz for 1 minute
Vibration Resistance: 10 - 55 Hz, 10 m/s² for 2 hours
Shock Resistance: 200 m/s² (20 g)
Moldings: Flame retardant polycarbonate
Dimensions: P41 - 96mm(W) X 96mm(H) X 65mm(D),
 53 mm depth behind panel
 P91 - 48mm(W) X 48mm(H) X 116mm(D),
 105 mm depth behind panel
Weight: P41 - 250 grams
 P91 - 150 grams
Approval Standards
Safety: UL61010C-1
 CSA C22.2 No.24-93
 EN61010-1 (IEC1010-1)

Protective Class:

IP65 for panel with additional option
 IP50 for panel without additional option
 IP20 for terminals and housing with protective cover.
 All indoor use.

EMC: EN61326
